Monoracle

Fully decentralised on-chain Oracle
based on game theory

Monoracle

A decentralized price Oracle

- **Permissionless price oracle quotation and feed creation**
- **Verified** on-chain **and agentic native**
- More **secure** price oracle

Current Design

- Centralised therefore vulnerable
- Price is heavily delayed
- Essentially it is just data uploading without *verification*

Monoracle

- Price market tested with skin-in-the-game
- On chain settle, dual asset stake
- AI Agent friendly

Price Provider

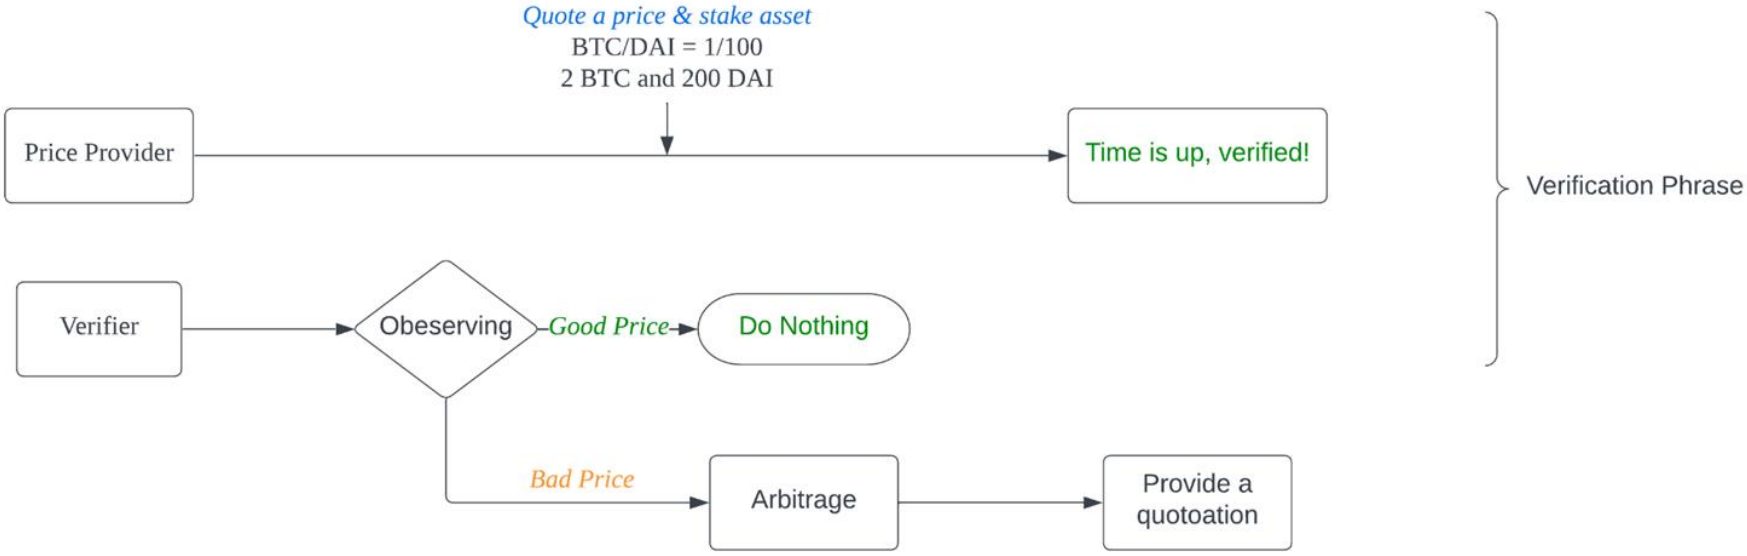

- Quote a price
- Also staking assets
  - Good price, take rewards
  - mispriced got punished

Verifier

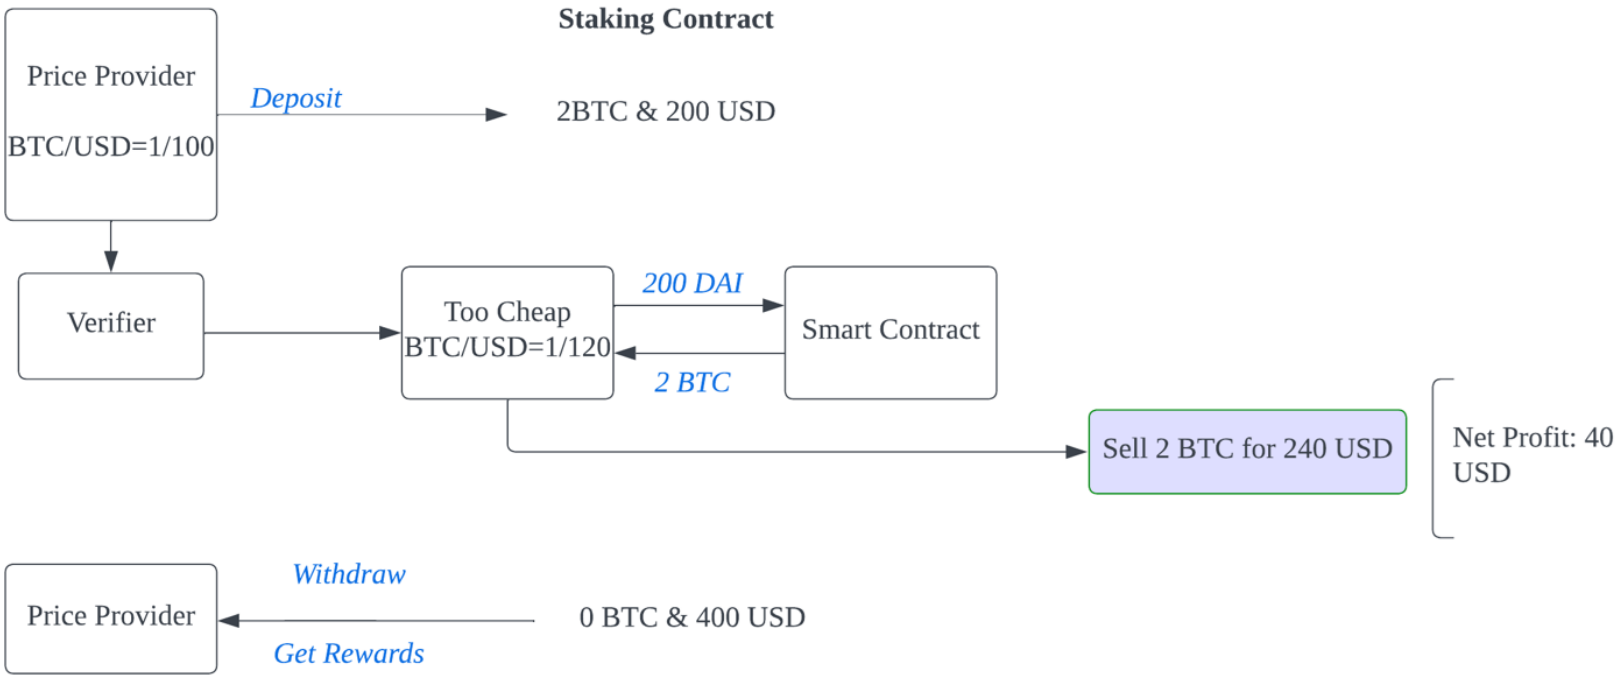

Verifying prices

- Good price, do nothing
- Bad price, veto, arb (and profit!)

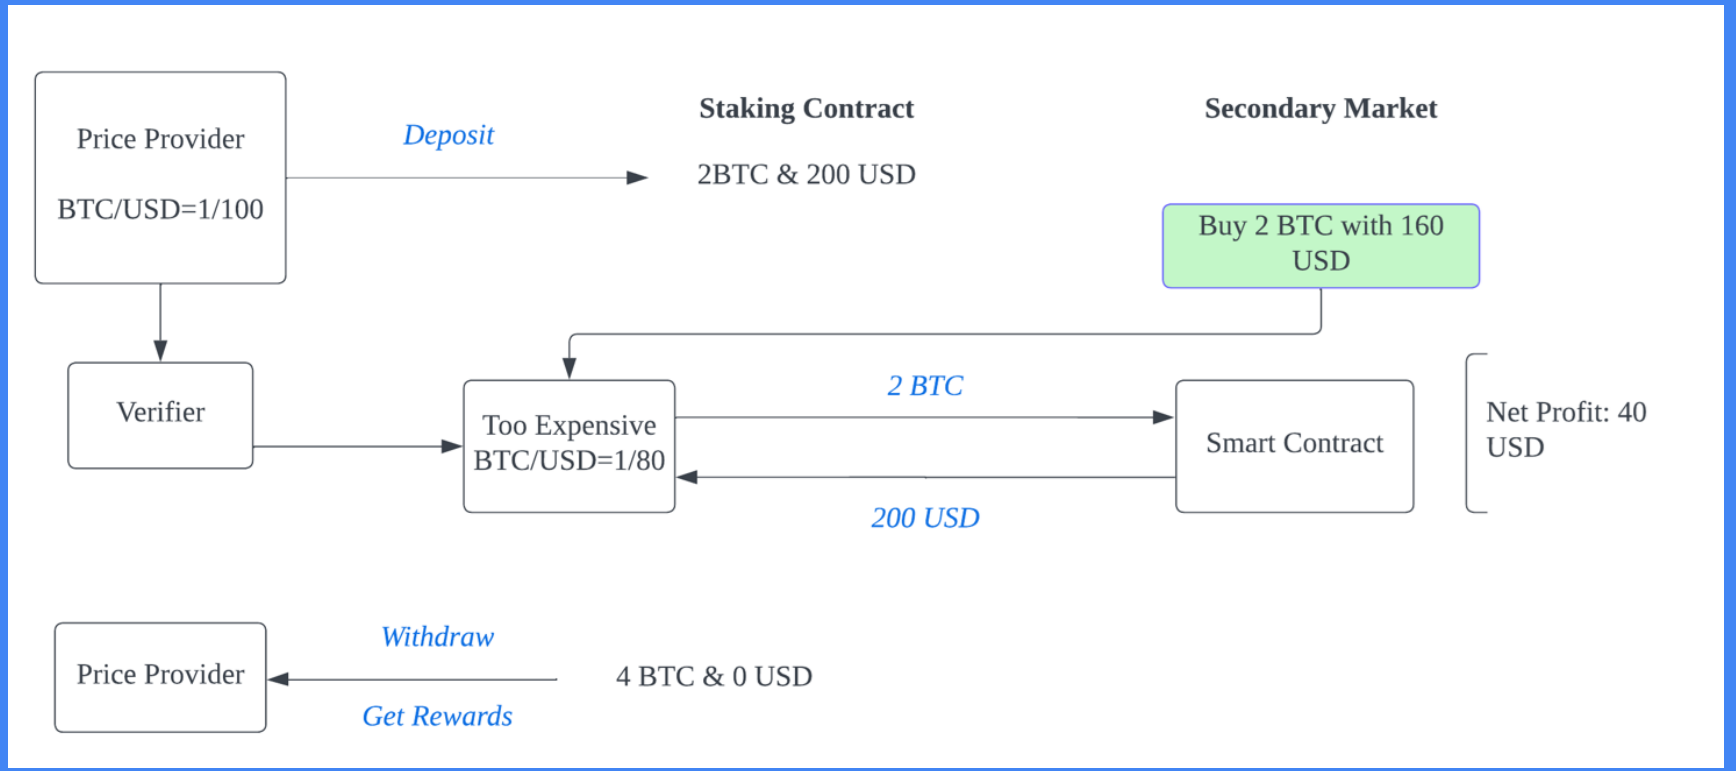

Price quotation Flow

Misprice Flow

Misprice Flow

Why built on a faster blockchain

- Faster finality
- Low gas fee
- Async/parallel/anti-MEV culture
